Subject : Re-Start of production at Murata TOME factory

March 28Th-2011

Dear valued customer,

We would like to express our gratitude for your patience and understanding since March 11th2011 date of Eastern Japan Earthquake which slightly damaged Murata' TOME factory.

We previously advised that the building itself has no major damage, and that there was some damage to the production line, and recently we confirmed that key utilities have been restored (Power supply; Gas , water;...).

I am therefore pleased to advise that Murata is in position to confirm production ramp-up of TOME plant according to the below schedule:

Item	Restart production	Full production
LQH31C/LQH31M/LQH3MC/LQH2HP/LQH3NP	Mid of April	End of April
LQW04/LQW15 LQW2BA/LQW2UA/LQW2BH/LQW21H/LQW31H NFW31S	Mid of April	End of April
LQW18	End of April	Beg of May
DLW21/DLW31/DLW43/DXW	End of April	Beg of May

Murata will start mass-production gradually from mid of April and expects to stabilize production quickly. Due to our huge production capacity we expect to recover most of your demand quickly.

As soon as production commences, Murata will re-acknowledge TOME backlog accordingly, and our customer service team will advise you as soon as the shipping schedule becomes available.

Best Regards
Murata Europe
